

Tree Planting Guideline

Introduction

Tree care and planting guidelines

The City of Bayswater has provided a highlighted link below that contains additional information regarding the maintenance of trees in the community.

[Street Trees - City of Bayswater](#)

Species Selection

The City has meticulously chosen its preferred tree species based on their ability to thrive in the specific local soils and environmental conditions. It is essential to strike a balance between native and exotic trees to establish a sustainable urban canopy that can effectively withstand the challenging conditions present in the streetscape environment.

The trees will support biodiversity and include species that will benefit a variety of fauna, including birds, reptiles, and insects.

The City will have evaluated site conditions, such as soil quality, exposure, weather conditions (including orientation), infrastructure, and services, to identify the most suitable tree species for each location. By carefully selecting the appropriate tree species, the City aims to promote the healthy and successful growth of its Urban Forest, ensuring its longevity.

The inclusion of species in the planting palette will have a significant impact on adapting to changing environmental conditions. By incorporating more drought-tolerant species and experimenting with other varieties, these species will play a crucial role. Moreover, specific species have been carefully selected for their suitability under powerlines, not under powerlines and as well as for areas such as parks and road medians. These selections have been made based on recommendations from nurseries that locally grow and source these species.

******We collaborate with the Department of Primary Industries and Regional Development (DPIRD) to oversee the Polyphagous shot-hole borer (PSHB) and myrtle rust in Western Australia. Given the emergence of PSHB in the Perth metropolitan area and the potential spread of Myrtle rust (caused by the fungus *Austropuccinia psidii*), certain species may be excluded from the selection pallet based on updated information provided by DPIRD.

Placement of trees on your verge

Due to the presence of underground services, all trees planted on verges need to be planted 2.7 metres from your boundary line towards the road. When trees are located on the front verge, they will be positioned between the driveway and side boundary at equal distance.

When trees are to be planted on a side verge, they will be spaced evenly in the available space.

Consideration will be given to various pieces of infrastructure on the verge to ensure adequate space is maintained, such as reticulation, power poles, manhole covers and hydrants.

How you can help

Residents' extra attention is highly valued and will significantly contribute to the survival and flourishing of the trees.

To contribute, you have the option to:

- Offer supplementary water to trees during the summer season.
- Ensure that grass is kept away from the base of young trees.
- Take care not to harm trees while mowing lawns.
- Notify the City about any damaged trees, enabling them to arrange for replacements.
- Refrain from parking vehicles in close proximity to trees.

Suitable Species No Power Lines

Genus/ Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall		Leaves & Flowers
<i>Agonis flexuosa</i>	WA Weeping peppermint	The medium-sized evergreen tree has a dome-shaped weeping habit, along with a somewhat out-of-proportion fibrous trunk and low branches. It produces white flowers that resemble those of the tea-tree, serving as a wildlife habitat and food source for native birds.	7-10m	5-10m	Western Australia Native			
<i>Angophora costata</i>	Sydney Red Gum	This evergreen tree is of medium size and has a dome-shaped weeping habit. It develops a fibrous trunk with low branches that may appear somewhat out-of-proportion. The species has distinctive smooth bark that is pinkish or orange-brown when new and fades to grey with age. The tree produces white flowers that bear a resemblance to those of the tea-tree. Additionally, it serves as a habitat for wildlife and provides a food source for native birds.	12-18m	8-15m	Native			
<i>Banksia ilicifolia</i>	Holly-Leaved Banksia	Banksia ilicifolia is a more primitive variety closely related to dryandras. It features unique flowers arranged in a dome shape, unlike the typical cylindrical shape found in most Banksias. Referred to as the holly-leaved Banksia, it is characterized by its dark green serrated leaves resembling holly. Thriving in full sun and well-draining soil, this tree, like other Banksias, attract birds and insects with its pink and cream flowers blooming mainly in Spring. Once established, it is drought tolerant but benefits from watering during dry seasons. This species is native to the Bayswater region.	10-12m	2m	Western Australia Native			
<i>Banksia integrifolia</i>	Coastal Banksia	The flowers of this captivating tree consist of dense, fuzzy spikes or clusters of tightly packed small flowers. These flowers are particularly eye-catching due to their lime-green colour, which gradually fades to a soft yellow. Bird attracting. The has distinctive silver-backed dull green leaves that are toothed or spiked. The banksia tree is highly resilient to drought and is considered a waterwise tree.	10-15m	4-8m	Native			

<div> <div>City of</div> <div>Bayswater</div> </div>		Street Tree Planting Palette						
Genus/Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall		Leaves & Flowers
<i>Brachychiton acerifolius x populneus</i>	Brachychiton 'belladonna'	The tree produces abundant clusters of stunning, pink bell-shaped flowers during late spring and early summer The canopy is quite dense making this an excellent shade tree. The new leaves emerge in a vibrant red colour, 'Bella Donna' thrives in sunny areas with well-drained soil.	5-10m	4-6m	Native			
<i>Corymbia eximia nana</i>	Dwarf Yellow Bloodwood	Small variety of the Yellow Bloodwood tree exhibits a compact and rounded growth habit with a slightly open canopy. This makes it an excellent choice for creating a charming under-story garden filled with shade-loving plants. The large clusters of creamy-white flowers provide a beautiful contrast against the mature foliage, which ranges from light green to bluish green. Additionally, the bark on the gnarly trunk adds to its appeal, with its rough and tessellated yellowish-brown to grey texture. Corymbia eximia nana attracts native birds and bees. Furthermore, it maintains a tidy appearance and does not shed much bark or leaves	9m	7m	Native			
<i>Corymbia ficifolia</i>	W.A Red Flowering Gum	Tree is a small to medium ornamental Australian Native tree known for its stunning floral exhibition in the summer season. The flower colours vary, spanning from deep red to pink and vibrant orange. The foliage is glossy and leathery with a grey-green hue. This tree serves well as a shade or windbreak. It flourishes in a sunny to partly shaded area with moist, well-drained soil. It is a lovely shade tree that is highly appealing to birds.	6-15m	5-10m	Western Australia Native			
<i>Corymbia maculata</i>	Spotted Gum	An impressive Australian Native boasts a striking silver-grey trunk adorned with spots and indentations. Its white flowers grace the landscape from late winter through spring. Flourishing in sunny and spacious locations, this species thrives in various soil types, although it favours well-drained soil. During its initial 10 years, it experiences rapid growth until it eventually reaches its mature height.	15m-30m	12-15m	Native			

<div> <div>City of</div> <div>Bayswater</div> </div>		Street Tree Planting Palette						
Genus/Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall		Leaves & Flowers
<i>Cupaniopsis anacardioides</i>	Tuckeroo	This tree features shiny dark green leaves, small greenish-white blooms, and orange berries. It thrives in sunny to partially shaded areas with moist, well-drained soil. It is a resilient species and is attractive to birds. Ideal for providing shade.	8-12m	3-6m	Native			
<i>Eucalyptus decipiens</i>	Redheart moit	This West Australian native tree is of medium size and has a wide-spreading habit, along with a very dense crown. It produces cream flowers in the spring and summer, which contrast beautifully with its glossy green foliage. The tree also develops rough, fissured, grey bark that typically remains on the branchlets. It is an excellent choice for screening, windbreaks, and as a shelter tree in parks, farms, and large gardens. It thrives in open, sunny locations with well-drained soil, and can tolerate sandy soils.	1.5m-10m	3-6m	Western Australia Native			
<i>Eucalyptus salubris</i>	Gimlet	The Mallee Gum tree is native to regions with low rainfall in Western Australia, specifically in the wheatbelt and goldfields areas. Its bark is smooth and can range in colour from steely grey to olive green, tan, coppery, or yellow. The trunks of these trees are slender and have elegant twists, while the foliage is a shiny green colour.	4-15m	4-10m	Western Australia Native			
<i>Eucalyptus tottiana</i>	Coastal Blackbutt	The tree's canopy is spreading by nature and rough, prickly bark make it a distinctive sight. It produces an abundance of white flowers in the summer and early autumn, which stand out against the dull green foliage. This tree is highly valued for providing shade to livestock, and its dense canopy and wide-reaching branches make it an ideal choice for windbreaks and screening. Once established, it requires minimal maintenance. It thrives in well-drained soil and can tolerate sandy conditions. Bird attracting. This species is native to the Bayswater region.	5-15m	4-10m	Western Australia Native			

Genus/ Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall	Leaves & Flowers
<i>Eucalyptus woodwardii</i>	Lemon-Flowered Gum	This mallet is native to Western Australia and is typically small to medium in size. It thrives in areas with low rainfall and can grow in sandy soils. The tree features long, leathery green leaves and eye-catching large yellow flowers, which eventually develop into woody capsules with a frosty silver appearance. The trunk of the tree is smooth and has a whitish grey colour. It is an excellent choice for providing shade, as it is resistant to both frost and drought. The tree flowers between July and November, attracting bees and birds.	6-15m	3-5m	Western Australia Native		
<i>Eucalyptus kochii</i>	Trayning Mallee	This mallee tree native to Western Australia is of moderate size. It shows great adaptability to various growing conditions, as it is drought tolerant, thrives in full sun, and can establish itself in different soil types, such as sand. The bark is rough on the smaller branches and firm on the majority of the stems. Its fruit features a rounded operculum, along with glossy adult leaves. During the summer, the tree produces white flowers that are attractive to birds.	6-8m	3-5m	Western Australia Native		
<i>Jacaranda mimosifolia</i>	Jacaranda	This tree is native to South America, has been extensively cultivated worldwide because of its beautiful, long-lasting flowers. The lilac-blue, tubular flowers of Jacaranda mimosifolia bloom from spring to summer, adding a stunning burst of colour during these seasons. Its semi-evergreen foliage resembles attractive fern-like leaves. Jacaranda mimosifolia is perfect as a focal point in avenue or street plantings, but its moderate size also makes it suitable for suburban gardens as a striking specimen or feature tree. It thrives in a sunny to partly shaded location with well-draining, moist soil. Jacaranda mimosifolia is drought-tolerant and benefits from light watering in the summer months	10-15m	8-10m	Exotic Deciduous		
<i>Melaleuca linariifolia</i>	Snow in Summer	Commonly known as snow-in-summer, is recognized for its stunning white and cream flowers that nearly blanket the foliage during the spring and early summer. This small, well-proportioned tree features a delicate, paperbark trunk and small grey/green leaves. While it prefers full sun, it can also withstand partial shade, although its foliage and flowering may not be as abundant, and tolerant of most well-drained soils and extended dry periods once established.	6-10m	6-8m	Native		

<div> <div>City of</div> <div>Bayswater</div> </div>		Street Tree Planting Palette						
Genus/Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall		Leaves & Flowers
<i>Pistacia chinensis</i>	Chinese Pistachio	The small deciduous tree displays beautiful autumn colours in shades of orange, yellow, and red. Its bark is dark grey with shallow furrows, and it boasts rich green leaves and clusters of small white flowers during the summer. This tree is resilient and can thrive in harsh conditions and poor-quality soils. It is well-suited for various landscape sites, nature strips, paving, and areas under power lines, as long as the soil is well-drained.	8-10m	6m	Exotic Deciduous			
<i>Pyrus ussuriensis</i>	Manchurian Pear	Commonly referred to as the Manchurian Pear, is a well-liked deciduous tree of medium size that displays stunning autumn colours. It is distinguished by its wider spread compared to other varieties and its early spring blossoming of creamy white flowers. This tree is perfect for offering shade or as a focal point in urban plantings, parks, or expansive residential gardens. It creates a striking visual impact when planted along narrow streets or avenues. Optimal growth conditions include full sun exposure and well-drained soil. Notably, this particular variety boasts high resistance to diseases, wind tolerance, and requires minimal upkeep.	10m	6-8m	Exotic Deciduous			
<i>Sapium sebiferum</i>	Chinese Tallow	This medium-sized tree is quite appealing. With heart-shaped green leaves that turn from yellow to bright red - purple in the autumn, it makes for a beautiful addition to any park or garden. Known for its hardiness, this tree thrives in sunny locations in warmer climates. Be sure to water it well during the establishment phase and plant it in well drained soil.	10m	6m	Exotic Deciduous			

Suitable Species Under Power Lines

Genus/Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall	Leaves & Flowers
<i>Acacia acuminata</i>	Jam Wattle	This resilient species is known for its ability to withstand drought, frost, salt, and lime. It thrives in various soil types and produces beautiful golden yellow flowers that resemble rod shapes. The flowers bloom profusely and release a pleasant fragrance similar to raspberry jam when cut. This tre grows quickly and is beneficial for providing shelter, controlling erosion. The timber is tough, heavy, long-lasting, and resistant to white ant damage. Typically found north of the Stirling Ranges, it is best suited for well-drained soils and is attractive to birds.	3-7m	3m	Western Australia Native		
<i>Callistemon viminalis prolific</i>	Bottlebrush	Attract nectar-loving birds to your garden with the eye-catching small tree. This weeping variety produces large red bottlebrush flowers that add colour and contrast to any garden or landscape in the spring and autumn. This evergreen small tree is a great addition to any garden or landscape. Recommended uses include as a focal point tree, for screening, in low-maintenance gardens, and in small native gardens. The tree thrives in a sunny location with well-drained soil. The specimen are resilient, versatile shrubs that can withstand poor soils and prolonged waterlogging. They are also resilient to moderate coastal conditions and short dry spells. The tree is a water-efficient tree with low water needs once established.	6-4m	2-4m	Native		
<i>Eucalyptus drummondii</i>	Drummond's mallee	A small native tree native to western Australia, sometimes with a twisted form, or occasionally growing as a mallee. It has smooth, powdery white to grey bark, sometimes with a pink tinge. The leaves are narrow elliptical to egg-shaped and have a dull greyish green colour. The tree produces flower buds in groups of seven, with white or cream flowers appearing from early winter to late summer, and hemispherical fruit. It is able to withstand drought and prefers full sun or partial shade in well-drained soils.	3-8m	2-3m	Western Australia Native		
<i>Eucalyptus lansdowneana</i>	Crimson Mallee	The tree is small, scraggly, slender tree, often growing in a mallee habit with smooth grey or cream-colored bark. Its leaves range from yellowish-green to grey-green in colour. It boasts striking deep crimson to rich pink blossoms in clusters during the winter and spring seasons. This tree can thrive in various soil conditions, is resistant to drought, and requires minimal upkeep. It is known to attract bees, nectar-eating birds, butterflies, and other insects.			Native		

<div> <div>City of</div> <div>Bayswater</div> </div>		Street Tree Planting Palette					
Genus/Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall	Leaves & Flowers
<i>Eucalyptus leucoxylon subsp</i>	Euky Dwarf'	This tree is a petite and compact variety of Eucalyptus leucoxylon, characterized by its single trunk, open canopy, and smooth attractive bark that peels off in flakes. The narrow grey-green leaves complement the tree's attractive appearance. Known for its abundant blooming, it showcases beautiful pink, red, or cream flowers from late autumn to winter. It is a favourite among birds and bees, making it an excellent habitat tree. Additionally, it can thrive in various soil types and is highly resistant to drought.	5-8m	3-5m	Native		
<i>Eucalyptus torquata</i>	Coral Gum	A small compact tree with distinct with its rough, greyish bark, dull grey-green leaves and attractively shaped buds and fruits. This tree produces beautiful coral-pink flowers in spring or summer. These flowers, which can also be creamy in colour, are rich in nectar and attract birds. A resilient Western Australian endemic to the Goldfields region. The tree that can thrive in the harsh conditions. This tree establish in various soil conditions, is resistant to drought.	6m	5m	Western Australia Native		
<i>Eucalyptus torquata x woodwardii</i>	Torwood	This Eucalyptus hybrid, a cross between Eucalyptus torquata and Eucalyptus woodwardii. It develops into a compact yet magnificent tree, adorned with striking clusters of sizable flowers in shades of pink, orange, yellow, and red that bloom intermittently all year round, particularly in the spring and summer seasons. Its foliage is a lovely blue-green colour. This tree attracts nectar-feeding birds. It should be planted in a sunny, well-drained area. Once established, it is resilient to drought.	5-8m	3-6m	Western Australia Native		
<i>Eucalyptus utilis</i>	Coastal Mort	The fast-growing evergreen tree is small to medium in size, boasting a dense rounded canopy of foliage. It has a short trunk with smooth grey bark that sheds in strips to expose a fresh brown-pink bark. The tree features oval olive-green leaves and produces white flowers from spring to midsummer. It thrives in sunny locations and can tolerate various soil types, salt, and drought conditions. Additionally, it is known for its good pollen and nectar production. This species is native to the Bayswater region.	8m	5m	Western Australia Native		

<div> <div>City of</div> <div>Bayswater</div> </div>		Street Tree Planting Palette					
Genus/Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall	Leaves & Flowers
<i>Eucalyptus victrix</i>	Little Ghost Gum	An impressive compact rapid-growing decorative tree native to the area features a strikingly sleek white trunk and silvery-blue leaves. This tree is usually grown for its attractive white trunk and irregular form. Abundant clusters of small creamy white flowers bloom during the summer months. Able to withstand brief periods of drought once established. Attracts birds and insects.	5-8m	2-4m	Western Australia Native		
<i>Hibiscus tiliaceus rubra</i>	Red Cottonwood	This tree is of medium size and has a rounded shape. Its foliage is heart-shaped and ranges from deep green to red in colour. In spring, it produces beautiful pastel yellow flowers that contrast nicely with the dark leaves. Hibiscus tiliaceus rubra is a versatile tree commonly used for screening, hedging, or as a shade or focal point. It thrives in full sun and can adapt to most soil types, although it prefers moist conditions. This tree is drought-tolerant and will attract birds to the garden. As an Australian native, it is well-suited to the country's changing climate and can withstand harsh conditions. It is a low-maintenance, water-wise tree.	8m	5m	Native		
<i>Lagerstroemia indica x fauriei</i>	Acoma Crepe myrtle (White flower)	Lagerstroemia Acoma is a small deciduous tree featuring pristine white blooms from summer to early autumn, along with captivating bark and foliage that transitions in colour during the colder seasons before shedding. This particular cultivar of Lagerstroemia is resistant to powdery mildew, displaying hardiness and thriving best in a location with full sun exposure and well-drained, slightly acidic soil. Additionally, it boasts moderate tolerance to both drought and heat.	4m	6m	Exotic		
<i>Magnolia little gem</i>	Teddy Bear	The dwarf variety of the evergreen magnolia (Magnolia grandiflora) is only a quarter of its size. Magnolias are known for their stunning flower displays, and the Little Gem is no exception. With dark green glossy leaves and brown velvety undersides, this tree produces full-sized creamy-white, fragrant flowers that stand out against the dark foliage. Little Gem is perfect for those with limited space, as it offers the advantage of full-sized blooms from a smaller sized tree. Plant Magnolia Little Gem in an area of full sun to part shade, with well-drained soil. Once established, it is a hardy and versatile tree that will tolerate a range of conditions and is relatively disease and pest free. Additionally, Magnolia Little Gem is waterwise and low maintenance.	3m	3m	Exotic

Genus/ Species	Common Name	Tree Descriptions	Mature Height (m)	Mature Width (m)	WA/ Native/ Exotic	Tree Overall	Leaves & Flowers
<i>Olea europaea</i>	Swan Hill Olive	This ornamental variety is known for its longevity and ability to add colour and contrast to any garden throughout the year. It is a smaller tree compared to other varieties and is considered a slow grower. Its leaves are silver, and it produces small, white flowers in Summer and Autumn. If left unpruned, it can grow to be as tall as it is wide. It requires relatively low maintenance and thrives in a sunny to partly shaded position with well-draining soil. Additionally, it is drought resistant.	6-8m	4m	Exotic		
<i>Prunus pissardii 'nigra'</i>	Ornamental Flowering Plum	This striking decorative tree is famous for its deep purple leaves that adorn dark branches during the summer months, producing beautiful pink flowers in the spring. It is ideal for home gardens or to create contrast with other green-leaved plants. Thriving in sunny locations with well-drained soil, this deciduous tree is resilient and can withstand various site conditions, including poor soil and dry, hot climates, while requiring minimal upkeep.	5m	5m	Exotic Deciduous
